### Experience

#### Full-Stack Developer

Freelance  
January 2022 – current

- I build a Email Newsletter API for content creators using rust, postgres and redis. Is fully tested, safe and with monitoring.
- I help small business offline to build their e-commerce and internal tools with accessible plans, integrating stripe API and modern front-end and deploy technics to grow in the future.
- Am building my own cluster to host servers and creating a model to replicate with clients to save money, using kubernetes for easy scaling and embedded databases with easy replication.

#### Full-Stack Developer Jr

Esteripharma  
January 2021 - July 2022 / México, CDMX

- Design and build internal applications that help with the logistics and data analysis thought pipelines and event-driven architecture, using PHP, JS and databases. Also improve the codebase and the design of the database fixing some bugs and creating scripts for some tasks.
- Manage their WordPress sites creating a central control, documenting and backup the databases and plugins. Also upgrade and improve the functionality and redeploy some sites that go down.
- I implement docker and more use of linux tools to improve the development workflow, like git for version the code and migrating to new versions of PHP and deps with containers.
- Improve the performance and the data integrity of the principal app using database transactions, reducing the amount of indices and using best query's redesigning the relations of the model.

#### Web Developer

Freelance  
April 2019 – 2021 / Mexico

- I build a inventory CRUD and sell it cheap to the local business, until today still have some clients that still ask me for improves or other tasks like operate a CRM.
- I build complete Web app's like a twitter clone to understand how work and what are the main features to cover to build a complex app.

### Education

#### High School – Programming

2015-2018 / Mexico

#### Self-taught

Most of my education is self-taught through online courses in Udemy or Platzi, books and creating projects with the help of the community and official docs of the technology.

### Skills & Interests

**Technical:** Linux, SQL, Web Development(HTML, CSS, JS, Backend Language), Distributed Systems, Kubernetes, Redis, Golang, Java, Rust

**Language:** Spanish(Native), English(Advanced)

**Interests:** Blockchain technology, Contribute to Open Source, Literature
